Luming Junior High School Introduction

- **I. School Highlights: A Cradle of Makers Deeply Rooted in Local Culture and Adaptive Excellence**
- Situated in the historic and cultural heartland of the Lukang living circle, our school steadfastly upholds the educational values of "adapting instruction to students' abilities and talents" and "normalizing instruction." We ensure that every child finds their own stage in a safe and diverse environment:
- **Cross-Disciplinary Makers and Technology Education:** We actively promote technology and hands-on education, integrating local cultural elements to encourage students to solve real-world problems. In recent years, our students have achieved remarkable results in various technology creation competitions, fully demonstrating their creativity and logical thinking.
- **II. Curriculum Features: Implementing the 108 Curriculum Guidelines and Competency-Based Teaching**
- Echoing the spirit of the 108 Curriculum Guidelines, our curriculum planning balances the "solidarity of mandated courses" and "local relevance of school-revised courses," comprehensively promoting competency-based instruction:
- **Cross-Disciplinary Integration and Sustainable Vision:** We integrate the United Nations Sustainable Development Goals (SDGs) into various subject curricula. For instance, combining local environmental and humanistic issues, we guide students to explore core concepts such as Sustainable Cities (SDG 11) and Gender Equality (SDG 5), cultivating global citizens with a macro perspective.
- **Industry-Academia and Higher Education Collaboration:** We actively introduce external higher education resources—such as collaborating with institutions like National Changhua University of Education—to organize science experiment workshops and camps in biology and chemistry. This allows junior high school students to experience university-level laboratory equipment and professorial guidance early on, deepening their spirit of scientific inquiry and hands-on practice.
- **III. Current Status of International Education: Global Citizens Rooted in**

Luming with a World View

- Amidst the wave of globalization, Luming Junior High School has never been absent. We firmly believe that international education is not merely language learning, but cultural understanding and exchange:
- **Diverse Online and Physical International Exchanges:** In recent years, we have actively expanded our international exchange footprint, establishing solid cooperation mechanisms with outstanding schools in countries such as South Korea, Japan, Singapore, and India. Through regular online thematic exchanges (such as campus life, historical building adaptive reuse, and cultural topics) and physical visits, we break down geographical boundaries.
- **Intersection of Arts and Humanities:** In terms of international exhibitions and performances, our school has also promoted transnational exchange activities combining music, art, and culture, enabling students to showcase their talents with confidence on the international stage and broaden their macro-international horizons.
